

MASTER CLONE

REVOLUTIONIZING CANNABIS CLONE PROPAGATION

The **MASTER CLONE** is the first and only automated machine on the market that completely automates and standardizes the cannabis clone propagation process.

With pioneering technology, this innovation allows growers and professionals to obtain uniform clones with full genetic control.

EU GMP compliant.

- High precision servomotors.
- SOFT TOUCHING® retractable grippers.
- Dual-function cutting system.
- Powder or liquid hormone application.
- Integrated cyclone vacuum.
- Configurable for different tray formats.

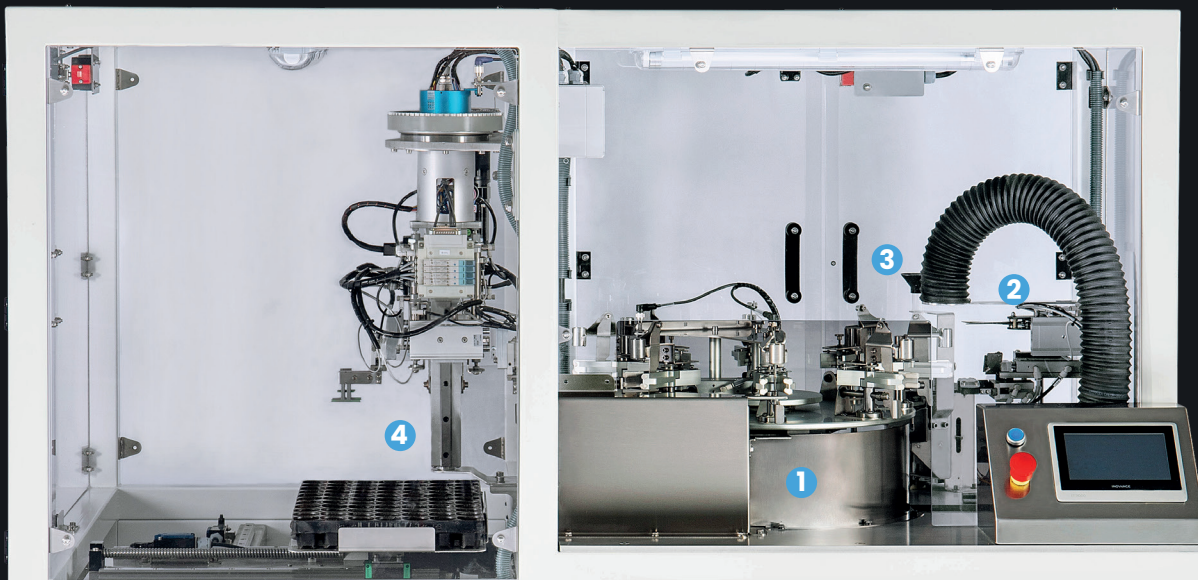

Electrical connection	110-230V, 50-60Hz
-----------------------	-------------------

Material	Stainless steel
----------	-----------------

Measures	183 x 127 x 175 cm
----------	--------------------

Weight	420 kg
--------	--------

AUTOMATE YOUR PRODUCTION

1. Cloning placement

The machine activates when it detects the cutting and the button is pressed, ensuring a fast and efficient process.

2. Automated cutting

A blade makes a clean 45° cut on the branch, and scissors trim the tips of the upper leaves.

3. Rooting hormone application

The base of the cutting is dipped into the hormone (liquid or powder) at a constant depth.

4. Automatic planting

The rotary arm places each cutting into the substrate with uniform depth and position, avoiding breakage with SOFT TOUCHING® technology.

150-200 clones/hour

800 - 1.000 clones/hour
