

PLASMASTATIC V2

HIGH PRECISION TRICHOME SEPARATOR

The **PLASMASTATIC V2** is a cutting-edge solution that uses advanced electrostatic technology to separate trichome heads from common kief contaminants such as pistils, stalks, and other plant debris.

Static electricity is used to **isolate trichome heads from unwanted material**, even distinguishing trichome heads from their stalks, ensuring the highest level of purity and quality.

With the patented technology of SC Filtration.

Electrical connection	400 W
Electric consumption	1.75 A
Material	Stainless steel
Air consumption	8 CFM at 100 PSI
Decibels	65 dB
Measures	41.3 x 27.5 x 77.1 inches
Weight	242 lbs

PURIFY YOUR EXTRACTION

Original product

Contaminants
& stalks

Final result

NO
need for chemical
solvents or additives

- Self balancing system for particle separation.
- Anti-clumping static discharge electrodes & vibrating plates.
- 4.3" multifunctional LCD display.
- Airflow sensor and regulator.
- Humidity and air temperature sensors.
- Complete safety system.

ADVANCED ELECTROSTATIC TECHNOLOGY

Designed to effectively isolate trichome heads from all residual plant matter using static electricity-based technology, achieving a solventless refinement.

Cannabinoid-rich particles
(negative charge)

Attracted to
positive electrode

Residual plant matter
(positive polarization)

Separated via
negative electrode

Self-Balancing System

The self-balancing system ensures particles separate once sufficiently charged, regardless of their initial size. Smaller particles need less charge, while larger ones achieve proportionally higher charges, enabling consistent, efficient separation for maximum purity and exceptional quality.
